EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Leo H. McCormick (25,897) on 3/14/05.

The application has been amended as follows:

IN THE CLAIMS:

In claim 1, line 33, --wherein said annular ring is characterized by an annular projection that forms a shoulder that retains said valve spring in an axial location downstream from said orifice-- has been inserted after "range".

Claim 3 has been cancelled.

In claim 4, line 1, "claim 3" has been changed to --claim 1--.

In claim 7, line 3, --is-- has been inserted after "that".

The above changes to the claims have been made to more clearly claim the invention.

REASONS FOR ALLOWANCE

The instant invention is deemed to be directed to an unobvious improvement over the invention patented in U. S. Patent No. 6,170,381 to Cramer et al. The improvement comprises a brake systems with an annular projections that forms a shoulder that retains the valve spring in

Art Unit: 3745

an axial location downstream from the orifice for the purposes of preventing a second turbulence from impinging on the valve spring and creating a resonant noise therein that exceeds the acceptable audible range.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

PRIOR ART

The patent to Cramer et al. is cited for the showing of a brake system similar to applicant's but lacking the annular shoulder that retains the valve spring.

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of three patents.

Mauro et al. (5,339,722), Isakson (4,961,846), and Bach (3,967,536) are cited to show brake systems.
